

## ALBERT / ALBERT litte

Due to increased air pollution in the room may cause blockage of the water outlet. Due to the blockage, the water can no longer be fed correctly into the water tank but flows away outside the tank. Smaller puddles of water may occur under or next to the device

In this case, proceed as follows:

**Important:** Disconnect the device from the power grip before cleaning!

On the back of the appliance you will find the water outlet. (picture instructions for use)

Remove the water tank and open the flap at the water outlet

Take a screwdriver to help and clean the water outlet by twisting. Small tip: you can wrap a thin cleaning cloth around the screwdriver
